negative power lens group is just after the objective lens and the intermediate magnification varying part is rotatable about an axis orthogonal to the optical axis of the objective lens.

Regarding claim 5, the prior art fails to teach or suggest wherein the intermediate magnification varying part has a positive power lens group and a negative power lens group and in a high magnification state the positive power lens group is just after the objective lens and in the low magnification state the negative power lens group is just after the objective lens and the intermediate magnification varying part rotates 180-degrees to switch between the high and low magnification states.
